

Does Digital Comfort Increase Negative Perceptions of Sponsored Online Ads?

- **Prediction:** higher digital comfort is associated with a stronger trust drop when a content is labelled “Sponsored”

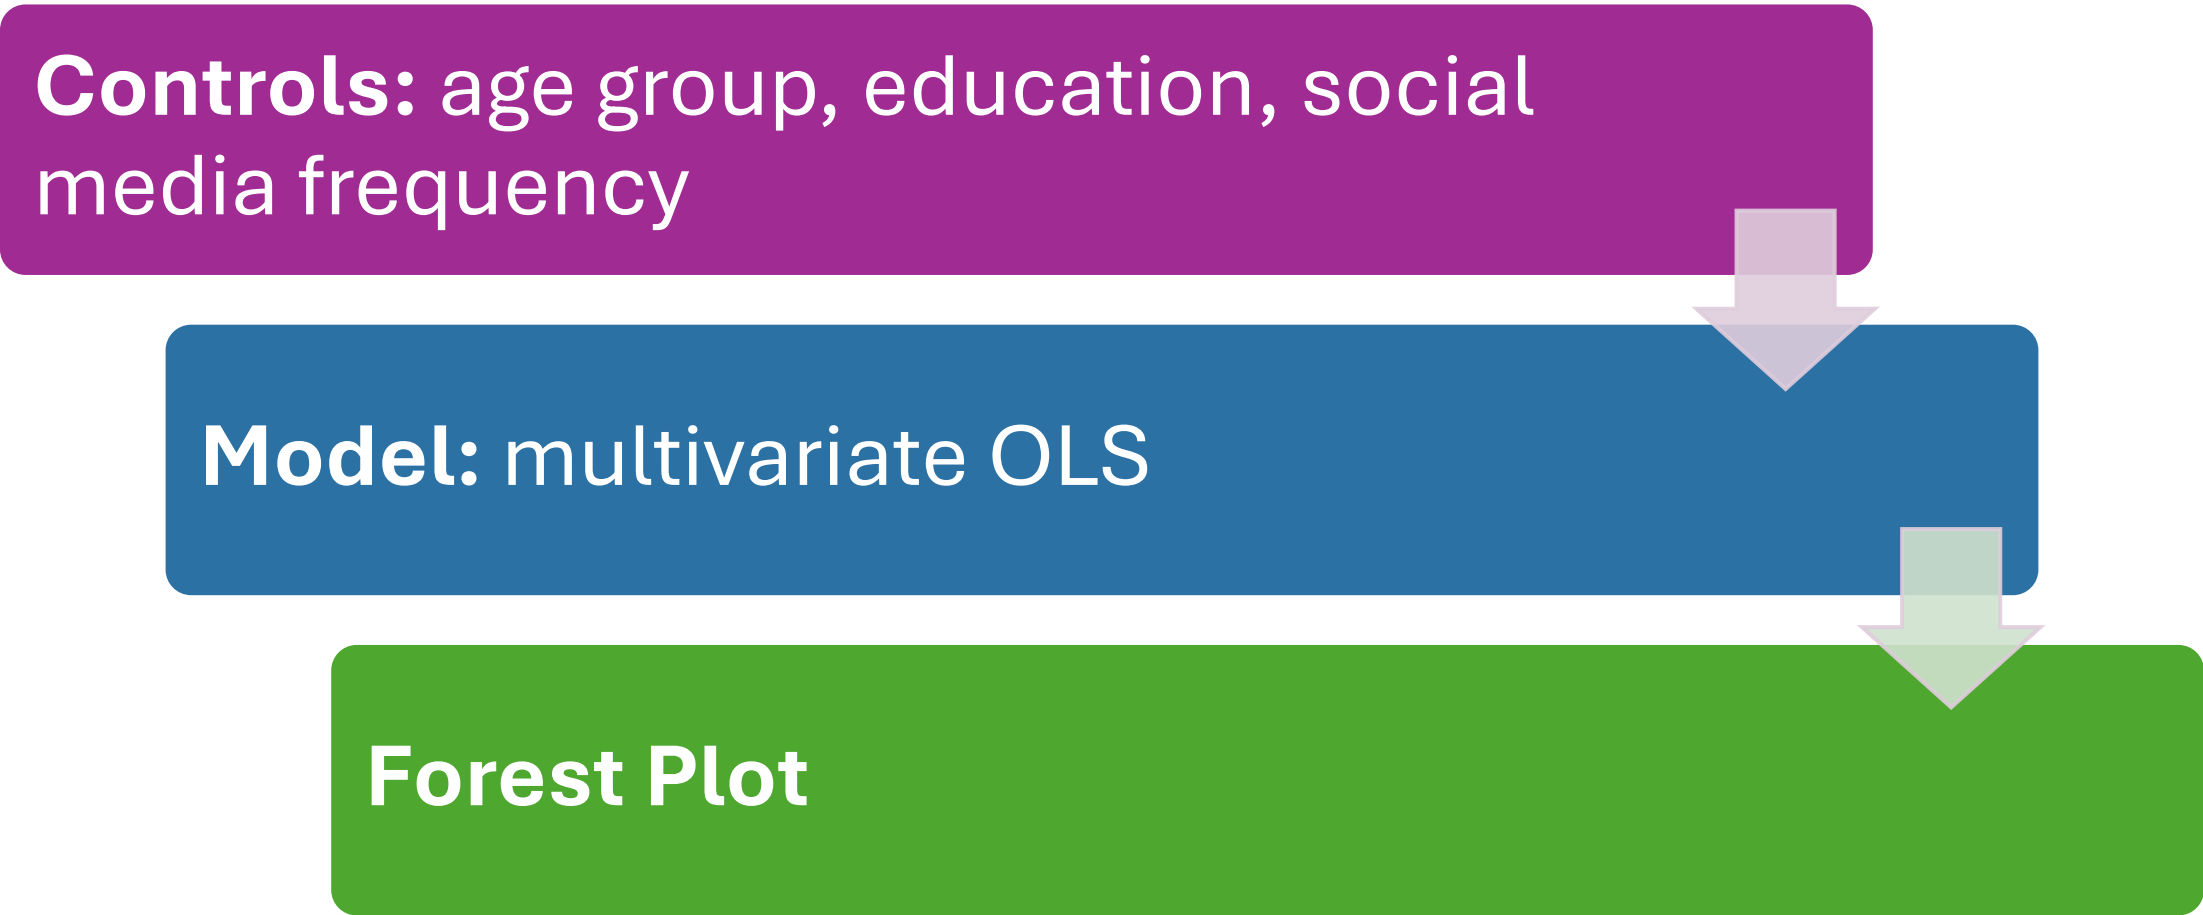

DAG: hypothesized relationships

Methods

Controls: age group, education, social media frequency

```
graph TD; A[Controls: age group, education, social media frequency] --> B[Model: multivariate OLS]; B --> C[Forest Plot];
```

Model: multivariate OLS

Forest Plot

Results

- **$R^2 = 0.038$**
- **$p = 0.151$**
- Direction Matches the prediction , but the evidence is weak
- Age group, Education level and social media frequency show no clear effects here either
